

Two-Column Relation Extraction Study

Abstract

Arin Wold, affiliated with the fictional Red Harbor Institute, proposed the Braided Column Method. The method was evaluated on the invented Delta Kite Dataset.

1. Method

The left stream records persons and organisations before crossing the gutter. Arin Wold authored the method.

The right stream records datasets and works without merging lines across columns. Red Harbor Institute maintains the Delta Kite Dataset and published the Braided Ledger.

2. Result

Braided Column Method consumed Delta Kite Dataset and produced Braided Ledger.
